

Brilliant Soluble Toners for Solvent Systems

BSTS SERIES

Brilliant® fluorescent soluble toners are high-strength, transparent colorants. They are suitable in flexographic and gravure printing inks used on flexible packaging papers, films, and foils, and UV-cure inks. Fluorescent inks made with these Brilliant® fluorescent soluble printing toners are excellent for gift wraps, label stocks, tissue coating, corrugated containers, plastics, glass, metal, wood and other specialty coatings.

All BSTS series Brilliant® fluorescent soluble toners dissolve easily in lacquer solvents, using high-speed mixers. They perform well for indoor applications, but should not be used on products exposed to direct sunlight.

Physical and Chemical Properties

Form granular powder
Melting Point 73 - 76°C
Solubility

Ethyl acetate excellent Isopropyl acetate excellent N-propyl acetate excellent 2-Nitropropane excellent Diethylene glycol excellent excellent Dipropylene glycol Monochlorobenzene good Orthodichlorobenzene good

Ethylene glycol monoethyl ether use as cosolvent Ethanol use as cosolvent Isopropanol use as cosolvent use as cosolvent Propylene glycol use as cosolvent Ethylene glycol nonsolvent

Resin & Plasticizer Compatibility

Ketjenflex 8 (Axcentive)	excellent
Santicizer 141 (Monsanto)	excellent
Polyamide	limited

Film-former compatibility

Formulation A

SS™ nitrocellulose (Hercules) excellent Ethyl cellulose (Hercules) excellent Alcohol-soluble butyrate (Eastman) excellent

Light stability

Indoors good Outdoors poor

The BSTS series of Brilliant® fluorescent colors may be used with most flexographic ink binders, including nitrocellulose, cellulose acetate butyrate, acrylics, ketone resins, and maleic resins. High-solids-content starting point formulations may be prepared as shown. Polyamide resins, because of their limited compatibility, have been blended with more compatible modifiers such as Ketjenflex 8 and Santicizer 141. Waxes and/or polyethylene dispersion additives at two percent based on total solids may be incorporated to improve mar-, rub-, water-, and slip-resistance. A formula for an unmodified gloss solution follows. Stir with a cowles-type disperser at high speeds to achieve a clear solution:

BSTS Series Starting Point Formulations¹

Unmodified Gloss Solution	Percent by Weight
Brilliant® BSTS soluble toner	45.0
Denatured ethyl alcohol	33.0
Ethyl acetate	<u>22.0</u>
Total	100.0
Viscosity (cps); Brookfield, No. 1 spindle	20
Formulation B Nitrocellulose Modification	Percent by Weight
Brilliant® BSTS soluble toner SS nitrocellulose	36.3 4.2

0.00
0.1
7.3
2.1

Viscosity (cps); Brookfield, No. 1 spindle

Formulation C

Polyamide Modification	Percent by Weight
Brilliant® BSTS soluble toner Alcohol-soluble polyamide resin (Versamid 750)	35.0 3.5
SS nitrocellulose, 1/4 sec.	3.5
Denatured ethyl alcohol	40.0
Ethyl acetate	<u>18.0</u>
Total	100.0

Viscosity (cps); Brookfield, No. 1 spindle

Formulation D

Alcohol-Souble Butyrate Modification Percent by Weight

Total	100.0
Ethyl acetate	<u>21.0</u>
Denatured ethyl alcohol	39.0
Alcohol-soluble butyrate	6.0
Brilliant® BSTS soluble toner	34.0

Viscosity (cps);
Brookfield, No. 1 spindle

Formulation E

UV-Cure Concentrate for Flexo	Percent by Weight
Brilliant® BSTS soluble toner	35.0
Ethoxylated Trimethylol Propane Triacrylate (TMPTA)	<u>65.0</u>
Total	100.0

Formulation F

<u>UV-Cure Concentrate for Flexo</u>

Percent by Weight

Brilliant® BSTS soluble toner 40.0
Ethoxylated Trimethylol Propane Triacrylate (TMPTA) 25.0
Urethane Acrylate Oligomer 35.0
Total 100.0

Flexographic inks prepared with Brilliant® fluorescent soluble toners can be formulated with better cellophane tape resistant adhesion and crinkle resistance than a commercial control, as shown in Table I. Formulation 1 and 9, in particular, show substantial property improvement over both the commercial control and the other experimental ink formulations tested. The stir-in addition of 1 percent microcrystalline wax also has a beneficial effect on ink properties without loss of gloss. This improvement was most obvious in block and abrasion resistance. Moderate to poor performance usually improved to good performance.

BRILLIANT® FLUORESCENT SOLUBLE TONERS IN FLEXOGRAPHIC INKS

A) Various soluble toner formulations									
FORMULATION #	1	2	3	4	5	6	7	8	9

Test Procedures

Please refer to Flexography Principles and Practices, Fourth Edition, 2nd printing, 1992 for updated test procedures. This book is published by the Foundation of Flexographic Technical Association, 900 Marconi Avenue, Ronkonkoma, New York 11779-7212.

Storage

When stored in a cool, dry environment, Brilliant® fluorescent BSTS soluble toners have an indefinite shelf life. Colorant containers should be kept closed to minimize contamination.

Toxicity

Test conducted through independent laboratories have found Brilliant® BSTS series fluorescent soluble toner to be "essentially non-toxic". A summary of test data is listed on the MSDS, which is available upon request. Good industrial hygiene and handling methods are essential in the use of all products whether or not they are determined to be hazardous.
